

VACATION FIRE SAFETY

Before Leaving Home:

- * Make sure all stoves and electrical appliances are turned off or disconnected.
- * Televisions, radios and computers should be unplugged to prevent fires from electrical surges or lightning strikes.

Hotels or Motels and other residences:

- * Insure smoke detectors are installed and operational.
- * If possible stay at locations that are also protected by automatic fire sprinkler systems.
- * Check and locate exits from the room you are staying in.
- * Read fire safety information that is provided in your room.

Camping:

- * Keep open flame devices away from tents and other combustible material.
- * Use caution and follow manufactures recommendations when using and refueling lanterns and cooking stoves.
- * Keep areas around campfire sites clear of combustible materials.
- * Never leave campfires or other open flame devices unattended.
- * If using a motor home or trailer, make sure there are functioning Smoke and Carbon Monoxide (CO) detectors installed.

General:

- * Know the emergency phone numbers for locations where you are staying.
- * When returning home, test Smoke and Carbon Monoxide detectors to insure they are still operational.
